Ionized Air Gun for Dust Collectors

This is a hand-held air gun designed to neutralize the static charges and to remove dust particles from the surfaces of toner cartridges and parts. High technology used in design can produce more efficient results for static electric problems even in high-speed applications. It provides high performance and efficient ionization with fast discharging time. Gun separates air molecules to positive and negative ions by the electric field it generates and transports them.

Any static charged product passed from the efficient distance of the gun will draw the opposite charged ions and neutralize the product. Electrical shocks, explosions, fire danger and dust attraction of which is caused by the static electricity will be prevented. Thanks to ionized air guns which do not need any calibrations and can be cleaned and cared for easily. Machines will perform hygienic, safe and high quality production with high performance without problems.

Even if the user touches the needles of the gun, each end of the bars are connected capacitively to high voltage so users won't be exposed to a shock which will harm them. Air which will be applied to the system by the compressor should be clean and dry. Because of its ergonomic and light structure, it has a simple, quiet and efficient way of operating.

MS-OW30 Oven

IMPROVES QUALITY

➪   Print quality is increased
➪   There will not be moisture in the sponges, moisture causes problems that ink is not diluted giving more vibrant colours
➪   Customer satisfaction is guaranteed
➪   Ink dispersion is better in the sponge
➪   Correct dosage ,no ink overflowing
➪   Longest shelf life
➪   30lt. volume
➪   220-240V / 1450W
➪   32x37x58 cm.

The oven has automatic temperature controlled, very simple to use , built-in with timer. Hot air venting system combined with the 2 heaters which covers the top and bottom surface areas of the oven ensures even temperatures throughout. So, reliable and safer vaporization occurs leaving the cartridge sponges dry and supple.
